

7.1.4 Water conservation facilities available in the Institution:

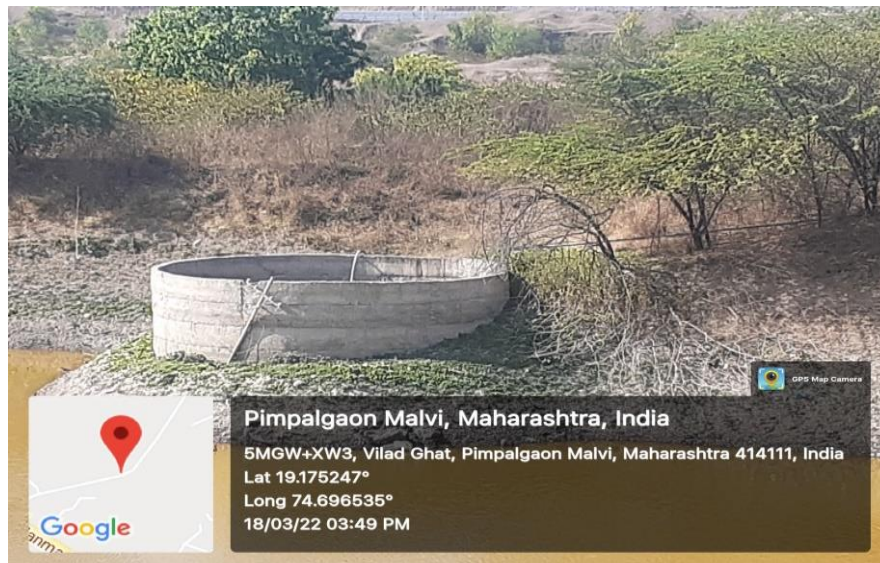

1. Rain water Harvesting:

Roof top rainwater is collected through sprout pipes. Further flows through open rain gutters and finally stored in underground storage tank for further use. Later this stored water is used for gardening purpose.

2. Bore well /Open well recharge

Rain water collected in check dam is collected in open well for percolation and underground recharge

3. Construction of tanks and bunds:

Check dam constructed to collect and store rain water
