Description of the Visit:

An Industrial Visit to Kohinoor Cloth Stores_Ahmednagar was organized for B.E. Mechanical engineering students. Centralized Air conditioning system was observed by the students. Central air conditioning (or central A/C) is a system in which air is cooled at a central location and distributed to and from rooms by one or more fans and ductwork. In a packaged central air conditioner, the evaporator, condenser, and compressor are all located in one cabinet, which usually is placed on a roof or on a concrete slab next to the house's foundation. Air supply and return ducts come from indoors through the home's exterior wall or roof to connect with the packaged air conditioner, which is usually located outdoors.
